

External IP Monitoring DATASHEET

Continuous Visibility Across your Estate

Visibility is the cornerstone of a robust security posture. You can't secure what you don't know about. With today's cloud enabled and rapid development environment, Edgescan keeps you informed of changes and exposures.

Edgescan delivers external IP monitoring which provides you the ability to see all services exposed to the public internet across your global estate. As new systems are deployed, decommissioned or a system changes, Edgescan can inform you of the event.

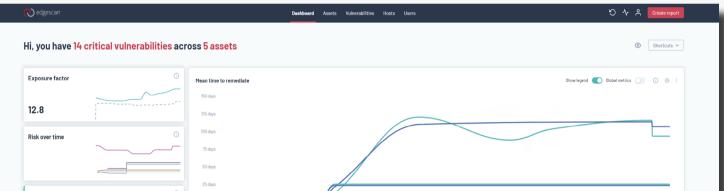

Know your Attack Surface

Changes to firewalls, exposed services and rogue deployments are all avenues of attack for any Enterprise. With Edgescan External IP Monitoring you are informed in real-time of change which may increase your attack surface and introduce additional risk.

In addition to External IP Monitoring, Edgescan uniquely offers API Discovery Service, which identifies and detects the

Keep informed – Edgescan Events

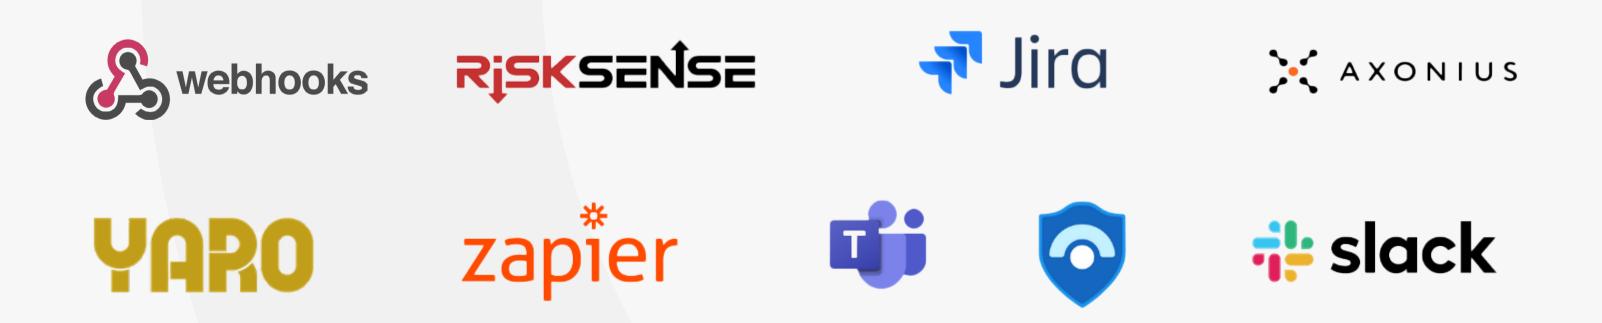

Edgescan keeps you informed as events happen. Using our simple customisable events feature you can be notified in multiple ways about anything that matters to you. Such as:

- Exposed Ports
- Newly deployed servers
- Firewall changes
- Exposed Services
- DNS

Notifications can be through Webhooks/API integrations, Ticketing systems, Instant Messaging, Risk Platforms, Bug Tracking, Asset Management and SIEM systems.

Features	Supported
Fast network host discovery and asynchronous port scanning across your whole global perimeter.	
Allowing the identification of networking devices, platforms, operating systems, databases and applications.	
Determine which service ports are present and listening for transactions.	
Customizable scan profiling – be specific about the services you want to test for.	O
OS Detection – Discovery of known OS types based on response fingerprints.	S
Perform live retests on exposed ports.	S
Historical host information for point in time reads of endpoints.	S
Identification of services running on the exposed layer.	S
Detect exposed services, ports and endpoints on a continuous basis.	S
Customizable targeted alerting, which notifies you automatically of any potential exposures (e-mail, webhook, SMS).
